Features

> High Efficiency and Energy Saving Design:

Innovative design manufactured at state of art plant, delivers optimum efficiency at lower energy consumption resulting in significant cost savings.

> Cathodic Electro Deposition (CED) Coating:

CED is the latest coating technology for corrosion resistance with uniform coating, provides 5 times more protection over conventional painting, resulting in longer life. Hydraulic parts of Kirloskar pumps are CED coated.

> Wide Voltage Range:

The motor is designed to withstand wide voltage variation from 160 to 260 volts and reduces chances of motor burning due to low/high voltage.

> Shielded Ball Bearing:

The pumps are fitted with shielded ball bearings, which results in low noise level and so no external lubrication is required throughout the life cycle.

> Dynamically Balanced Rotating Parts:

Minimum vibrations protect components from damages during the operations, consistent performance as concentricity is maintained.

> Easy Maintainable Designs:

Easy maintainable design and better interchangeability of components so that pump can be serviced even at remote locations by semi-skilled technicians.

> High Suction Lift:

The pump has suction lift capacity up to 7.5 meters with high head, allowing to pump water at high volumes for a variety of applications.

> Enhanced Safety Features:

All electrical parts of the pump are covered, which makes it safer to use

➤ Light weight and Compact Design:

It allows user to carry the pump anywhere with ease, adding to its portability and convenience of use.
