

## Contributing towards the Betterment of Yet Another African Country

Kirloskar Brothers Limited (KBL) supplies pump sets for a project facilitating supply of drinking water in Medea, Algeria, including the company's first-ever RKB 200/37 – 7-stage pump in vertical execution mode.

KBL's prominent presence in Africa over the last five decades, especially the essential role that the company has played in the betterment of many of the developing countries in the region, is what truly makes the company a global market leader in the pumping industry. Some of the most transformational projects executed by the company have been in countries like Egypt, Senegal, Ghana, Uganda, Lesotho, etc.

Strengthening its position in the African market further, KBL

RKB 200/37 – 7-Stage Pump in Vertical Execution installed on-site

recently supplied crucial pump sets for a major pumping project in yet another developing African country – Algeria. The order was executed under the supervision of the Potable Water Municipal Authority, Algeria.

The project involved the supply of 21 KBL multi-stage pump sets for facilitating the distribution and supply of drinking water to Medea city, the capital city of Medea Province in Algeria, located 68 km south of Algiers, the capital of the country.

KBL, which bagged the order against stiff competition, brainstormed suggesting various options and types of pumping solutions to suit the client requirements and expectations. Finally, based on the project and client requirement, KBL supplied multi-stage type RKB pumps in both vertical execution (3 pump sets) as well as standard horizontal (18 pump sets) mounting mode that provided the customer the choice and liberty to choose from the options based on the available space. The biggest highlight in this endeavour, however, was the

design, supply and the first ever vertical execution of its exclusive RKB 200/37 – 7-stage pump set.

The overall order was executed within the stipulated time much to the satisfaction of the customer. Thus, today, KBL pumps are a part of the prestigious pumping project that ensures drinking water supply to the city of Medea. More importantly, it is among the single largest orders for pump sets for the company from Algeria till date.

It is KBL's association with critical pumping projects like these that makes it a trusted global force to reckon with in the African hemisphere and, with every such endeavour, the company's brand-dominance in the region keeps on getting stronger and better.
