KBL Developed A Large Vertical Turbine Pump For Circulation Of Fermentation Broth Application

KBL recently developed a large Vertical Turbine pumpset. It is a single-stage Horizontal Axial Flow Pump developed for use in the Circulation of Fermentation Broth. The pump has a discharge capacity up to 12960 m³/hr at 365 rpm and 10368 m³/hr at 285 rpm. The castings, shafting, sleeves, and

fasteners comply with NACE MR0175/ ISO 15156 and ME010. It has Dual Pressurized Mechanical Seal with plan 54.
