Pumping Indian Metro Rails

KBL supplies Hydro Pneumatic Pressure Boosting System (HYPN) pumps, FM/UL Fire-fighting pumps, and NS dewatering pumps to the Kanpur Metro Project.

KBL is among the leading providers of a wide range of pumping solutions and services for most of the leading Metro Rail projects in the country. We recently bagged an order to supply our Hydro Pneumatic Pressure Boosting System (HYPN) for water management. It will deliver intelligent water management to the metro. Based on the 'water on demand' concept, it supplies water with the required pressure where it is required. This significantly cuts electricity consumption, resulting in significant cost savings. The HYPN system can be managed remotely from anywhere, anytime, making its maintenance convenient and easy.

KBL also supplied FM/UL fire-fighting pumps for fire protection and Non-clog (NS) pumps for sewage applications. The inbuilt NS pumps have a stainless steel impeller with high reliability, which will ensure smooth operations. These non-clog impellers allow for the smooth passage of solids and are available with single or multi-vanes in semi-open, enclosed, or free-flow designs to accommodate a wide range of applications.

KBL has been a preferred supplier of pumps for various applications in many metro projects in India, namely the Delhi Metro, the Jaipur Metro etc.
