## **WATER MANAGEMENT POLICY**

We understand social, economic and environmental value of water and the need to conserve it.

To uphold our value of "Commitment towards the Environment", we shall implement effective and best water management practices across our operations, communities and value chain.

To implement this, we shall strive to -

1. Utilise water resources responsibly through reduce, reuse and recycle approach to minimise our water footprint
2. Implement best practices like rainwater harvesting, recharge pits, and rooftop collection of rainwater to replenish underground aquifers
3. Implement measures to minimise the generation of effluent and sewage
4. Ensure zero liquid discharge by utilising 100% recycled water in our operations and facilities
5. Comply with applicable legal & other regulatory requirements related to water & wastewater
6. Actively engage with our employees, society and value chain partners to promote awareness about responsible usage and conservation of water

**WE AIM TO BECOME WATER NEUTRAL BY 2030 !**
