

Enriching Lives

Cooling Innovation: KBL Delivers Seamless Solutions at Sohar Airport

Kirloskar Brothers Limited (KBL) has successfully supplied and commissioned six critical valves – four Hydraulically Operated Pump Discharge Valves (HOPD) and two Electrically Operated Pump Discharge Valves (EOPD), for the upgradation of the seawater intake pumping station for the common cooling water system at Sohar Airport, Oman. Demonstrating precision and efficiency, the project was executed within tight shutdown timelines, ensuring minimal disruption to airport operations.

The common cooling water system plays a crucial role in maintaining optimal temperatures across airport facilities, essential for both passenger comfort and operational efficiency. The successful commissioning of these valves ensures a seamless and dependable cooling process. By providing high-quality, durable solutions, KBL has not only improved system performance but also contributed to reducing maintenance needs.
