

Enriching Lives

KBL's Pumping Solutions for the Mahan Super Thermal Power Project Improve Energy Security in MP

The Mahan Super Thermal Power Project in Singrauli, operated by Adani Mahan Energen Ltd, is one of Madhya Pradesh's largest power initiatives. Phase I includes two 600 MW supercritical units supplying 1,200 MW to the state. The ongoing Phase II expansion adds two 800 MW supercritical units, while the proposed Phase III will take the plant's total capacity to 4,400 MW, making it a major contributor to India's energy landscape.

Kirloskar Brothers Limited has supported this critical expansion by supplying vertical turbine pumps

for Phase II. These pumps ensure efficient, reliable water management, essential for the performance of upcoming supercritical units.

The project is set to boost Madhya Pradesh's economy through improved energy security and grid stability. Reliable power from Mahan will strengthen Singrauli's industrial growth and enhance quality of life for surrounding communities.

KBL supports regional progress with dependable, high-performance pumping solutions for large-scale infrastructure development in India and abroad.
